Natural Selection Is Not Evolution! The supposed vehicles of evolution are mutations, natural selection, and other mechanisms that—when combined with that pixie dust of time—allegedly led to the development of all life forms present today. However, natural selection merely redistributes or reduces preexisting genetic information, and mutations often corrupt the information.

...

Darwin's Theory of Evolution is the widely held notion that all life is related and has descended from a common ancestor: the birds and the bananas, the fishes and the flowers -- all related.

Darwin's general theory presumes the development of life from non-life and stresses a purely naturalistic (undirected) "descent with modification".
