Sample Problem 12.3 . The two blocks shown start from rest. The horizontal plane and the pulley are frictionless, and the pulley is assumed to be of negligible mass. Determine the acceleration of each block and the tension in the cord. STRATEGY: • Write the kinematic relationships for the dependent motions and accelerations of the blocks.

6.0 Kinetics of particles - Work/Energy The principle of Work/Energy is an alternative to Newton's Second Law for solving kinetics problems. It is very useful in certain situations. A key to when to use it is if the distance of the motion is given or the motion is given in terms of the location of the mass involved.

In this chapter we will study the kinetics of particles. this topic requires that we combine our knowledge of the properties of forces, and the kinematics of particle motion previously covered in chapter 2. With the aid of Newton's second law, we can combine these two topics and solve engineering problems involving force, mass, and motion.
