Most SNA books tend to focus on the analysis of social network data. Prell helps you think about how to gather the data from research questions, design, data collection, theory, and so forth. Also, I thought there was just 'social network theory,' but Prell spelled out the common social theories being used in the field, and gives you lots of ...

A network, in the context of electronics, is a collection of interconnected components. Network analysis is the process of finding the voltages across, and the currents through, every component in the network. There are many different techniques for calculating these values. However, for the most part, the applied technique assumes that the components of the network are all linear.

A.M. Chiesi, in International Encyclopedia of the Social & Behavioral Sciences, 2001. Network analysis (NA) is a set of integrated techniques to depict relations among actors and to analyze the social structures that emerge from the recurrence of these relations. The basic assumption is that better explanations of social phenomena are yielded by analysis of the relations among entities.

Activities are lettered (A - G), again working from left to right. The duration of each activity is shown by a number entered against its identifying letter. A forward pass is made through the network and the earliest event time (EET) is entered in the upper-right quadrant of each event circle.

Network theory is the study of graphs as a representation of either symmetric relations or asymmetric relations between discrete objects. In computer science and network science, network theory is a part of graph theory: a network can be defined as a graph in which nodes and/or edges have attributes (e.g. names).

Evolving networks by definition are networks that change as a function of time. They are a natural extension of network science since almost all real-world networks evolve over time, either by adding or by removing nodes or links over time: elementary actor-level network measures like network centrality change as a function of time, popularity and influence of individuals grow or fade ...
