In a 3700 system, RDBMS acts as a multi-user database server. This means that many workstations (clients) can access the information stored in the database. RDBMS is the software between the physical database and you. We've made accessing the database even simpler by adding an additional software layer between you and RDBMS.

See Manual:Shared database for examples and more information. If your wikis are already established and you want to switch to a single sign-on, you can use the CentralAuth extension. It has a few more features than a shared user table, but it's more difficult to configure and it's tailored toward a Wikimedia-style setup.
