Coolant Temperature Sensor Testing & Replacement. Car Model: BMW E36. The engine coolant temperature sensor is responsible for sending the temperature of the engine to the DME and the instrument cluster. It is a four wire sensor, with two separate circuits, one for the instrument cluster and one for the DME. If you have a coolant sensor fault code stored in your DME and your engine isn't running right, I suggest replacing the sensor before digging too deep.

### BMW E36 Coolant Temperature Sensor Testing & Replacement

This article applies to the Dodge Ram 2nd Generation (1994-2001). The coolant temp sensor(s) have a few jobs. They send a signal to the gauges so you can monitor engine temperature, they tell the radiator fans when to kick on or off, and they let the ECU know how warm the engine is so that it can fine-tune the fuel delivery to give you maximum performance as well as fuel efficiency.
